

Basic Windows Troubleshooting Guide

1. Computer Running Slow

- Restart your PC to clear temporary files.
- Open *Task Manager* (Ctrl + Shift + Esc) and end unnecessary tasks.
- Delete junk files with *Disk Cleanup*.

2. Wi-Fi Not Connecting

- Check if Wi-Fi is turned on.
- Restart the router.
- Run *Network Troubleshooter* in Windows.
- Use `ipconfig /release` and `ipconfig /renew` in Command Prompt.

3. “No Bootable Device Found” Error

- Check boot order in BIOS (set hard drive as primary).
- Ensure the hard disk is properly connected.
- If error persists, reinstall Windows.

4. Common Linux Commands for Beginners

- `ls` → List files
- `cd foldername` → Change directory
- `pwd` → Show current path
- `sudo apt update` && `sudo apt upgrade` → Update system
